OHIO COLLEGE OF
PODIATRIC MEDICINE
Emblem designed and created by
Elliott J. Kramer, '71
The Staff of the 1969 Occopodian would like to dedicate the yearbook to the Fourth Year Class of the Ohio College of Podiatric Medicine. We would like to add our congratulations and best wishes for the future in Podiatric Medicine and hope that the success for which you have worked so hard for will be attained.
"FOR WHEN MAN DIETH, HE SHALL CARRY NOTHING AWAY; HIS GLORY SHALL NOT DESCEND AFTER HIM . . . . ."

Dr. William Henry Sassaman has indeed, given to many of us part of his glory. The course he taught, the things he said, and the way he was, all combined to form his outstanding image. Those students who interacted with Dr. Sassaman found more than just answers to questions. A profound sense of warmth, sincerity and truth were continually displayed. His periods of quiet were times of thought and his periods of instructional discussion were times of enjoyment. For the students, fortunate enough to benefit from his offerings, his glory remains alive and vibrant as ever.

Websters assigns to the word “educate” as “The process of developing and cultivating the individual mentally or morally”. Certainly, Dr. William Henry Sassaman was an educator. He conveyed much more than anatomy to his students but always operated within the academic realm. Never, were questions left unanswered, and his constant search for knowledge was exemplified by his involvement and eagerness in class. The Doctor attended Franklin and Marshall College and also the University of Chicago where he received degrees of A.B., A.M., and B.D. For many years, he was an active participant at the Western Reserve Medical School in the Department of Anatomy. His membership in such professional organizations as the Ohio Academy of Science, Sigma Xi Society, and Phi Beta Kappa Society more than demonstrate his academic achievements.

Perhaps, the most outstanding attribute of the late Dr. William Sassaman, was his continuous and sincere interest in the student. The individual with a problem, regardless of its origin, could always look to the thin, elderly gentleman for and often times, very conclusive advice. He always had time to listen, evaluate, and relate to the concerned student. Respect, for a man like this is indeed a small commodity, in return for his conscientious and sincere relationship with the students.

Thus, to Dr. William Henry Sassaman, we dedicate this Yearbook of 1969. We give it to him that was an inspiration for all of us that knew him and benefited from his teachings. We give it to him, the educator, of whose academic devotion was more than fulfilled. And lastly, we dedicate the yearbook to Dr. William Henry Sassaman, a wonderful and sincere man.

CHARLES YOUNG
Class of ’71

"MARK THE PERFECT MAN,
AND BEHOLD THE UPRIGHT;
FOR THE END OF THAT MAN IS PEACE . . . . ."
“Mark the perfect man, and behold the upright; for the end of that man is peace”
NEW PERSPECTIVES
IN HEALTH

New Health Legislation stress our nation's determination to provide all persons with adequate medical care. Broad community care service programs are being developed throughout the country to meet the diverse needs of ill and disabled patients.

Some 74 million Americans today have one or more chronic conditions—42 percent of our population. Four out of five people 65 years or older have at least one chronic condition, and more than half of those afflicted suffer varying degrees of disablement. Much of this disability could have been avoided, for some of the disabilities are preventable, and moreover, when chronic illness does occur, many of the complications arise not from the disease itself, but from prolonged confinement in bed. Chronic disabilities and the hardships they create for the patient and his family, force us to take a New Perspective in Health. Health obviously cannot mean complete freedom from disease, but it is correlated with the capacity of each individual to function at his best within the unavoidable limits of his particular problem. The challenge to comprehensive care then, is to keep the dimension of the "unavoidable limits" as generous as possible, and to help the patient preserve, and use, and hopefully strengthen, all his remaining adaptive powers.

The podiatrist's role in this challenge is an important one. Certainly he is better equipped than any other member of the "Health Team" to cope with the many complex problems associated with the patient's rehabilitation as they relate to his own specialty.

The podiatrist's service may be decisive in whether the condition progresses or the patient recaptures, retains, or improves degrees of usefulness—to himself, to his family and to his community.

We are embarking upon one of the most interesting and revolutionary periods in the history of mankind. The exciting changes in our society tax the thinking of even the most imaginative dreamer.

The challenge to the class of 1969 is unique. The usual theme of the annual message to the graduates, i.e., "This is the year of decision," etc., etc., this year carries a much deeper and more meaningful connotation. In short, the health care of the American people has taken on new concepts which bring with them new responsibilities and new challenges for the podiatrist.

We feel sure that when the time comes, you will take your rightful place in the community health complex—and that you will be clear-sighted professionals, and will have preserved the vision we have tried to give you here.

B. C. Egerter, D.S.C.
Chairman of the Board of Trustees

BOARD OF TRUSTEES

Dr. B. C. Egerter
Dr. M. Pomerantz, M.D.
Dr. T. J. Fletcher
Dr. D. F. Bliehall

Mr. J. P. Sullivan
Dr. Forrest H. Cox
Judge Joseph H. Silbert
Dr. Robert B. Nicklas

Mr. William R. Pringle
Dr. C. P. Beach
Mr. Clark T. McConnell
To the Class of 1969:

Let me add my congratulations and best wishes to the many you have already received on this day of graduation. You are the first class to graduate from the Ohio College of Podiatric Medicine -- this is only a name change -- for your preparation and education in the past four years has been in podiatric medicine.

Recently James Walsh, a professor of sociology and anthropology, pointed out that the role of the intellectual is not to rest in security. Instead, he has to face the uncomfortable and frequently painful task of being in his society but not of it.

Ben Jonson once said, "It is right to prefer the past to the present, since by the one we are instructed and by the other overwhelmed." This is never more true than it is today.

The student reflects on the nature of the problem, the historical basis for the current attitude and because of his knowledge, the basis for any change in attitude. Through education, an agency which leads to change of attitude, the student will transfer his attitudes into the action programs which in his mind are necessary for the betterment of his fellow man.

The goal today is for masters, particularly in a health field, of sufficient ability and learning to take over the leadership of our communities. The human spirit is confused and seeks substitutions for the previously established values of courtesy and decency.

Human beings have become actors who have to think of their every word, and movement and gesture. They struggle in an inferno of doubts and their life is lived with chaotic uncertainties. But these doubts and questioning of standards have been present throughout the entire course of human progress and have enabled man to use his intelligence and make life easier on earth.

I know that this class as students and as intellectuals will accept these challenges and create for themselves a positive way of life which will take the good and use it for the best of all. I am sure that you are equal to this challenge.

Cordially and fraternally,

M. M. Pomerantz, M.D.
President
Today you are students, but soon you will join the ranks of the alumni. In our fast-changing world, four years seems like a long time and the "hard grind" of study apparently will be over. However hard and demanding it may have appeared, it should also have been pleasurable for two reasons. The first reason is that the gaining of new knowledge and skill is in itself a highly satisfying experience. However, the second reason is of even more importance, and that is the satisfaction of learning a body of knowledge which by its application contributes in a vital way to society.

I mentioned above that the "hard grind" of study apparently will be over. Many of you perhaps realize that study is never over, especially in a fast-developing health field such as podiatry. All of you will be learning as you practice your profession, and many of you will augment your education in podiatry by attending seminars and conferences.

Education is always a two-way street, and we at the college will be learning from you, the alumni. We will constantly try to improve, as I am sure each one of you will try to improve. The progress of podiatry is enhanced by all of us working together. There will be many changes in podiatry in the years ahead. We have confidence that some of these changes will come about from the future efforts of the Class of 1969.
MRS. BARBARA A. YARRIS
Director of Admissions

PHILIP R. WISNER, PH.D.,
Director of Administrative Services
FOURTH YEAR
Commencement speakers usually frighten the graduates by telling them that the world is theirs. I'm not about to tell you the world is yours or "your oyster," but I do expect each of you to take a rightful place in it.

It will be expected of you to do your part in supporting your local, state and national associations to further the advancement of the profession.

Your active participation and membership in the Alumni Association is solicited. There has never been a time in the history of our college that the moral, financial and personal support of its alumni was more necessary than it is now.

With these words, I congratulate you on the attainment of your degree, Doctor of Podiatric Medicine. May you catch the vision of the almost boundless possibilities of your profession, find and share with your colleagues a love of knowledge and a passionate and persistent search for truth.

With kindest personal regards and a sincere desire for each of you to take your rightful place in our world, which is your world.

Sincerely,

Philip R. Wisner, Director
Administrative Services
“DEAR LORD, THOU GREAT PHYSICIAN, I KNEEL BEFORE THEE. SINCE EVERY GOOD AND PERFECT GIFT MUST COME FROM THEE, I PRAY: GIVE SKILL TO MY HAND, CLEAR VISION TO MY MIND, KINDNESS AND SYMPATHY TO MY HEART. GIVE ME SINGleness OF PURPOSE, STRENGTH TO LIFT AT LEAST A PART OF THE BURDEN OF MY SUFFERING FELLOWMEN, AND A TRUE REALIZATION OF THE PRIVILEGE THAT IS MINE. TAKE FROM MY HEART ALL GUILE AND WORLDLINESS THAT WITH SIMPLE FAITH OF A CHILD I MAY RELY ON THEE.”

AMEN
MARVIN GROSSMAN  DAVID GUNSBERG  ROBERT GUYTINE

RICHARD JASON  BARRY J. JOHNSON  GEORGE KARRAT
PODIATRIST'S OATH

I do solemnly swear to my God, on my honor, to those who have taught me, and by all things that I hold sacred, that as a practitioner of Podiatry, I shall abide by the following precepts:

I shall, above all, hold paramount the welfare of my patient, regardless of fee or favor, and I shall neither prescribe nor give any treatment or drug which will be detrimental to his well being. As a good citizen and because my professional training specially qualifies me to render this service, I shall give advice concerning foot health to all who ask, despite race, creed, rank or station in life.

I shall not solicit patients, knowing full well that this is beneath the dignity of the professional way of life, the aims of which are to render public service. I shall deem it my solemn obligation, without fear or partiality, to warn the public against the devices practiced and the false pretensions made by charlatans, which may cause injury to their health.

I shall cherish those who have taught me, holding high their principles and precepts and I pledge that I shall do everything that I am able to do to promote and to protect the profession of Podiatry and to aid my fellow practitioner.

I shall support and maintain the American Podiatry Association and its counterparts being constantly aware of the need for unity and advancement.

In swearing to this oath, I hereby dedicate myself in service to the health of humanity, and I hold as my goal the relief of pain and suffering. If I keep this Oath, may I receive God's guidance in the practice of my art, and may I enjoy my life in the respect of all men.
THIRD YEAR
As we dynamically progress through this, our third year of formal education in Podiatric Medicine, we more fully realize the scope and concept of our chosen profession. It excites us. It moves us. It is a living thing, and we pursue its potential with a surging vigor.

Our cups are raised to the graduating class of 1969. We wholeheartedly congratulate you, Doctors, and wish you success and encouragement in all that you do.

With a humbleness and a respect born of awareness, we remain indebted to faculty and staff alike who have devoted themselves and their talents to our educational fulfillment. We are enlightened by all that surrounds us, and we advance with the glow of a chronic enthusiasm.

EDWARD S. STEIN
RICHARD STEINER
JAMES N. WHIPPLE

WILLIAM A. WOOD
CHARLES YARNEVICH
When we arrived at O. C. P. we had great expectations, enthusiasm, ambitions, and yet these feelings were tempered with uncertainty, prudence, and in some cases fear. Our common goal was evident and yet the tasks ahead bore down upon us with the seemingly unattainable amount of knowledge to be gained.

Now as sophomores the expectations and enthusiasm have somewhat waned yet the motivating force of ambition seems to spur us on. I note in each man as never before the earnest desire to learn and somehow master these seemingly unsurmountable objectives; that not only lead to a degree of D.P.M. but also lead to the success and the confidence that comes with the reality in that we know more about the lower extremity than any other person.

Therefore, although grades seem to be the measure of success within these ivy covered halls, grades are not the motivating factor. Behind a facade of jokes, rumors, ridicule, and sometimes even disinterest beats the hearts of men and women that all want to do his or her best. We want to do our best so that as Doctors of Podiatric Medicine we will have the knowledge that for the patient can perform “miracles”. What will be knowledge to us will seem virtually a miracle to them.

Therefore as we are about to enter the clinic, we can’t help but feel apprehensive and perhaps a little disappointed in our feeling that we should have done better and learned more. Yet somehow we can rest assured that we too will survive the tide and master the skills which render us qualified for the title of Doctor.

Each of us anxiously awaits the day when we with pride shall see the results of the “miracles” of our own knowledge.

LESLEY WOLFF
Freshman Podiatry Entrance Exam

1. The commonly accepted nickname of the Ohio College of Podiatry is:
   A. Toe City
   B. Benny's Barn
   C. Home of the Hawk
   D. Chicken Coop

2. In order to repeat a final exam at O.C.P., one must first contact:
   A. President of O.C.P.
   B. President of U.S.A.
   C. President of A.P.A.
   D. Mike Salter

3. The Ohio College of Podiatry is in what state?
   A. Confusion
   B. Chaos
   C. Ohio
   D. All of these

4. Which of the following is the most important qualification in order to become a teacher at O.C.P.?
   A. Dress with fowl taste
   B. Have a B.S. degree
   C. Be unemployed
   D. Speak English

5. The remodeling of the clinic facilities will take place at what time?
   A. In 3 days
   B. In 15 minutes
   C. Next month
   D. In 1984

6. The student's lounge in the hallowed halls of ivy is:
   A. Well ventilated
   B. Cleaned annually
   C. Equipped with a cafeteria
   D. A card casino

7. The word "talus" refers to:
   A. A Jewish prayer shawl
   B. A short tail
   C. The 1st M.P. joint.
   D. A cheat sheet

8. In order to be formerly excused from a class it is necessary to:
   A. Have an excuse from the Mayo Clinic
   B. Have a note from your parents
   C. Be friendly with the front office
   D. Have your father come to school
The class of 1972 is indeed fortunate. Included in our class are representatives of the United States, Canada, and Brazil. On the average our members have, the highest pre-Podiatry qualifications yet demonstrated at the Ohio College of Podiatry.

We are proud to be a part of this school. Since we have arrived here, the college has initiated the wave of the new renovations. No doubt, with the improvement of the facilities there will come a betterment of the Podiatric profession.

Our instructors, are of the highest caliber. We have been offered exceptionally enlightening lectures and discussions. From us our instructors have expected performances equal to their excellence of instruction. This definitely improves the degree of professionalism of the school and its students.

We would like to thank the upper-classmen for their unselfish help this year. Their advice and encouragement has proven a firm support for our beginning efforts.

To the graduating Seniors we wish our luck and extend our congratulations. You have accomplished what at this moment seems eons away for us. We are indeed fortunate to be represented out in the professional world by men of your devotion and competence.

The New Role

BY CHARLES YOUNG

In the recent years, the role of the podiatrist has undergone a vital and dramatic transition. As an active member of the medical profession, his service to the public has become both a necessary and intrinsic part of the health team. The podiatrist of today, need no longer be an individual well versed on a single aspect of medicine. His four year education offers to him, the opportunity to gain a "general" understanding or familiarity with the broad spectrum of general medicine. This so called familiarity includes much more than those courses pertaining to the foot. The student's acquisition of the more basic concepts is not geared to make him an authority, but rather to fulfill a professional responsibility.

It is my contention that the podiatry student at the present is confronted by more than a mere opportunity to acquire a generalized medical knowledge. As a future practicing podiatrist, it should be his responsibility as a professional or better yet, as a doctor to this understanding. Once the graduating student enters the doctor-patient relationship, he also enters a world of interactions with other members of the health profession. The various interrelationships with these individuals can not and should not be avoided. It is my feeling that it is through these professional and social interactions that podiatry will find its most rapid avenue for growth as a profession. The podiatrist who can converse on an academic level with other health specialists is indeed a profitable emissary for his fellow colleagues.

In conclusion, we as students must accept and gain the maximum benefits from our present education. To selectively apply ourselves in only those courses pertaining directly to a practice, is to fall short of our professional responsibility as a doctor. The future lies ahead and our knowledge will be the stepping stones to our individual goals. A basic understanding of the various sciences offered to us, can only aid in fulfilling the new role of Podiatrist.
The world in which we live is changing with increasing rapidity. Tomorrow will bear little semblance to today. A world committed to a philosophy founded on the logic of pure science tends to personalize machines and depersonalize people. Such depersonalization can make it most difficult for one to understand other people. Some find themselves at the mercy of a world with which they cannot cope nor communicate.

To reverse this process involves concomitant efforts in opposing directions. Vigorous strides must be made to further the scientific progress now being made so that man's future existence can be healthful, fruitful, and even assured. Simultaneously, he must make himself impervious to influences which foster egocentricity and think and act in terms of what is most beneficial for one's fellow man as well as himself.

Podiatry offers the unique opportunity to fulfill one's destiny both from the standpoint of scientific achievement and of humanism and humanities. It is this very young tradition which podiatry graduates inherit and which will provide a core for a most productive life. With the blessing of good health, we could not ask for more.

Among the many diversified experiences offered to the student, a most profitable facet is the externship program. The student is introduced to a wide variety of clinical cases and is able to benefit from the medical and podiatric management of these conditions. The extensive work with geriatric patient should prove of great value in the podiatric practice. The clinical management of the long term patient is also invaluable experience for those students oriented toward hospital affiliations. A more complete understanding of the various extended care facilities is also gained by the student, and is another step in orienting the podiatry student to a particular modality of rehabilitative treatment.

Perhaps the most rewarding facet of the extern program is the student extensive involvement in hospital protocol. His work at the various clinics and hospitals offers to him an opportunity to interact with other members of the medical and allied health fields. The concept of hospital protocol proves invaluable in the private podiatric practice.

Thus, the extern program at the Ohio College of Podiatric Medicine, Cleveland Foot Clinic is an extended training ground for the senior podiatry student. Hopefully, the graduating student will emerge as a more complete and certainly more knowledgeable individual. During his involvement at the hospitals, his four years of podiatric preparation are culminated, utilized and extended. The resulting product of the extern program at the Ohio College of Podiatric Medicine more than substantiates its invaluable benefits.

"Of course by the time you guys get to be seniors we'll have the New Clinic............"
A Message From Our Editor

The 1969 OCCOPODIAN is a significant publication. It is hallmarked by many unprecedented institutions. One such institution is the yearbook’s inclusion under student council jurisdiction. This enables the publications steady and regular printing year after year. It also enables a continuing line of officers responsible for its publications.

With the change in administrative affairs, there are constitutional developments. For the first time, the OCCOPODIAN runs under a constitution. The OCCOPODIAN is not a product of the 4th year students, but a product of the student body. As of this year, the OCCOPODIAN will be published by the OCCOPODIAN PUBLICATION COMMITTEE, an affiliate of the Student Council.

Objectives of the yearbook were initiated by the change of name of the College. This OCCOPODIAN is the first yearbook to be published under the college’s new name of the Ohio College of Podiatric Medicine.

The Occopodian tries to capture the challenges of the most dynamic profession in the United States. To capture this dynamic health profession is an imperceptible task. However, we, the staff, hope to illustrate the enthusiasms of the profession’s students, the prophetic attitude of its leaders, and the patience of the administration and faculty.

We are no longer the allied health profession we were. We ARE a Health Profession! We are Doctors of Podiatric Medicine!

We extend our deepest wishes of luck and prosperity to the graduating class of 1969. It is my hope that this publication will provide them with tokens of fond memories of past education, past friendships and past satisfactions. May they have happiness in their future.

My extreme gratefulness cannot be expressed to everyone on my publications committee. May I thank my junior editor Steven Karbel. Without his editing, I would have been lost. I am grateful to Michael Salter and Elliott Kramer who designed the entire yearbook and who assisted in every aspect of the yearbook. Thanks go to Louis Endress and Michael Hoffman who wrote and collected all writing matters for this publication. I also wish to thank Marvin Grossman and Harvey Wine for their business management.

Special considerations are appropriate for Dr. Philip Wisner, who guided, counseled, and advised us throughout the yearbook publications.

I wish to thank Dr. Max M. Pomerantz for his motivation and cooperation which made this publication successful.

May this publication represent the student body, the College, and the profession of Podiatry.
ALUMNI

OFFICERS: 1968-69

Dr. Rosalie S. Dikran ............................................. President
Dr. E. Buchbinder .................................................. President-Elect
Dr. John Ziegler .................................................... Vice President
Dr. Henry Fenton ................................................... Treasurer
Dr. George Peterson ............................................... Assistant Treasurer
Dr. A. Schwartzfeld .............................................. Recording Secretary
Mrs. Bettie Adams ................................................ Executive Secretary

Congratulations and best wishes for a most successful future to each member of the graduating class of 1969! It is with great pride that we welcome you into our beloved profession, and into the ranks of dedicated Alumni throughout the entire country.

The Alumni Association was founded in May, 1941. It was forced to disband during the war years, and was reorganized in 1954. Its primary purpose is to develop a spirit of loyalty and fraternalism among the graduates and former graduates of the Ohio College of Podiatry. It is also deeply concerned over the welfare of the student body, the Profession and the Ohio College of Podiatry. It has always contributed to the best of its ability, to the needs of the college as such needs became known.

The Alumni Association has also endeavored to encourage and support growth and development of educational standards and physical facilities; and through unified planning and action, aid in the formation or revision of policies designed to sustain the advancement of the profession. With these views in mind we salute and commend the college for its participation in a program designed to unify the degree given by Podiatric Colleges (Doctor of Podiatric Medicine) and also in joining with the majority of colleges of Podiatry in the name change; hereby identifying our Alma Mater in the future as "Ohio College of Podiatric Medicine".

Our Congratulations to the Board of Trustees and the Administration of our College for Progress in Podiatry! If our new and future Alumni are as dedicated and loyal as our past members, then truly our Profession is on the Move . . . .

Rosalie S. Dikran, D.S.C.
President
NATIONAL A.P.S.A.

National A.P.S.A. is made up of an executive council of eight officers, with each school represented by at least one officer. It is their responsibility to effectively establish and carry out programs which benefit the students at each school.

In the past, the A.P.S.A. played a major role in the unification of the degree to D.P.M. We conducted consensus poles at the colleges to determine what degree would be most satisfactory to the majority of the students. This material along with other information was made available to the A.P.A. At its next meeting the A.P.A. House of Delegates passed this degree change rule.

Our future plans are aimed at programs to promote a broader clinical experience. We are studying the feasibility of a student exchange program between the colleges.

We are also involved in programs that will provide more preceptorships and internships to our graduates.

To keep these programs going we need the support of every Podiatry student, not only financially, but with your ideas for programs that will keep us moving forward.

WILLIAM F. FADDOCK
As the official student publication of the Ohio College of Podiatric Medicine, FOOTPRINTS serves as a means of communication among students, administration, faculty, and alumni. As the College expands, the problem of communication becomes an increasingly important one. FOOTPRINTS has attempted to bridge this communication gap by expanding at a pace equal to that of the school.

Publication of a bimonthly paper with a circulation of more than 2500 involves many active and interested parties. These are the people to whom the editors and readers of FOOTPRINTS owe special thanks for their part: Dr. James Conforti, Dr. Phillip Wisner, Mrs. Joan Zak, the staff and contributors, and those past editors who have helped to develop the paper to its present status.

We hope in the future the editors of FOOTPRINTS will have continued cooperation and success. May we also extend our sincere congratulations and hopes for good fortune to the class of 1969.
The Year 1969 will be greatly remembered by all who have participated in student council affairs. It is a true close of another decade. A decade which will only be a memory of the past to all of us, the future doctors of podiatric medicine. What are the memories of the sixties and especially '69? We as members of the student council can look back and be proud that we participated in the student government when many changes were about to be in effect. The rebuilding of the clinic, the change in the name of the college and degree to the Doctor of Podiatric Medicine, will be only a few of these memories I, as the president of Student Council shall cherish the greatest memory, for I have been associated with the men and woman who have comprised the council of 1969. I will remember this council, as a group of people, working collectively in advancing the profession of podiatry in a manner whose personal dedication always were tried by unsurmountable obstacles. I would like to thank the executive committee for all their strenuous efforts in student government. I shall remember them as the best executive officers in the history of the college.

FRANK SOBOLEWSKI, President

Student Council
Executive Committee
Louis Endress, V.P.
John Stroh, Secretary
Jerry Gross, Treasurer
Pi Delta marks the establishment of a long-awaited entity—a national society honoring podiatry students for scholastic achievement. Each of the five colleges has a representative chapter, ours being designated by the Greek letter Beta. It is the objective of Pi Delta to "promote high scholarship in podiatry and the podiatric sciences in order to progressively advance the profession." Membership in the society is limited to those students who demonstrate academic excellence after their first two years, accumulating an average of at least a 90 while ranking in the upper 20% of their class.

Throughout the year, Beta chapter has demonstrated its thirst for knowledge. Dinner meetings presenting guest speakers, co-sponsorship of a seminar, and general participation in other groups by its members exemplify the scholar's interest in deriving more than the average from the educational process. Faculty-student interaction is welcomed and exhibited in Pi Delta. Unity of purpose becomes the keynote in the increasing need for a liaison between instructor and student.

As members of Pi Delta graduate and begin to practice, their memory of belonging may start to fade. One thing will remain, however—the desire to learn so that the profession can continually progress.

DAVID A. EHRLICH
President, Beta Chapter
WOMEN'S BOARD

Women's Board is a composite of professional and philanthropic activities. It is an organization comprised of wives and fiancées of the students.

Our monthly meetings include lecturers who help to broaden our understanding of Podiatry, others who speak to us for the betterment of our personal lives.

Through a variety of fund raising projects, mainly the selling of caduceus jewelry, we are able to present the clinic with a generous gift each year. We participate, along with other organizations, in the orientation program for first year students. Each year we donate and distribute two Thanksgiving baskets to needy families in the area.

I would like to take this opportunity to thank all my officers who gave ideas, support, enthusiasm and encouragement for a most worthwhile and successful year.

The Kappa Chapter of Alpha Gamma Kappa Fraternity was founded in 1927 at the Ohio College of Podiatric Medicine. Since then it has constantly strived to maintain unity, friendship, and the high standards of fraternalism which were set down by our founders. A.G.K. continues this precedence by being both a social and scientific fraternity.

This year, home demonstrations were given on several subjects, and A.G.K. continued its services to the Eastern Star Nursing Home and to the East Tech High School football team. These programs enable the underclassmen in A.G.K. to participate more meaningfully in the field of Podiatry and to gain experience and rapport in order to work with the public. This will be so important in their chosen profession. Again, A.G.K. continued membership in the Centurian Club, as a living memorial to Dr. Lance T. Oswalt.

As always, A.G.K. has a full schedule of social events to spark the brotherhood. Several parties were held during semesters, concluded by the annual Dinner Dance and senior stag party.

Through all of these events, social and scientific, the brothers feel a closer unity both in our fraternity and in the well chosen profession of Podiatry. We also feel A.G.K. has given our brothers lasting memories which will be valued through the years.

I would like to extend my thanks to all the members for the help I received this year. Moreover, to the brothers of the Senior Class, may I extend my sincere wishes for a healthy and successful future in our professional career.

R. S. Jason
Today, with the ever widening scope of the Podiatric practice and the many specialties that have come into their own as integral entities of the field, the institutions have taken on the major role of expanding their training to prepare the student for the new degree of Doctor of Podiatric Medicine. However, there is a definite desire by the student for extra-curricular didactic and clinical instruction to give him a more meaningful sense of awareness in his chosen profession, and to keep him up to date on the new and varying aspects in the field. Therefore, it is our desire in Kappa Tau Epsilon to fill the void in these extra-curricular activities as best as we can. We have instituted a surgical program at the county house of correction; in which upper classmen are instructed in the techniques of foot surgery, and the under classmen are instructed in the techniques of foot orthopedics and palliative treatment for foot ailments. To facilitate our didactic needs we have set up lectures and clinical demonstrations for the students, by specialists in their chosen fields, as frequently as three times a month. In order to round off each individuals social awareness, we have numerous affairs ranging from small informal gatherings to a most magnificent formal banquet honoring friends and brothers of Kappa Tau Epsilon.

I would like to thank this years executive council who have done their utmost to uphold the tradition of the fraternity. To Ben Clark, our vice president; Steven Wittenberg, our treasurer; Earl Beck, our recording secretary; Rich Eusanio, our corresponding secretary; Sam Person and Marvin Grossman, our scientific chairmen; Burt Fogelman, our social chairman; Michael Stern, and Mark Lenet, our rush chairmen; and to Anthony Tocco, our historian; I extend my gratitude.

This year, as in the years past, we have added something new to our endeavors. We have started a slide file to be used as a teaching tool for our future members. We have also begun an information file that can be used by the student for familiarizing himself with any state in the nation, and Canada as to states laws; requirements; geographical information; and anything that would be helpful to the future practitioner in aiding him in choosing a desirable location, or for any other purpose he wishes. Another undertaking this past year was the alumni letter. In this letter we tried to let our former members know of each others whereabouts and to keep them informed of our undertakings.

Our advisor for the past few years has been Dr. Michael Kates. We would like to take this opportunity to extend our gratitude to him, who is affording us the benefit of his time and energy in helping us put forth another fruitful year. Thank you Dr. Kates.

The brothers of Kappa Tau Epsilon wish to convey their heartiest congratulations and best wishes to the class of ’69. We wish you much success, and hope you play an active role as alumni of the Ohio of Podiatric Medicine and Kappa Tau Epsilon national scientific fraternity.

David Keller
President
As President of Phi Alpha Pi Professional Podiatric Fraternity (Epsilon Chapter) I take great pride in its purpose; its accomplishments; and its activities. Our Constitution states that the purpose of our chapter shall be to further fraternalism among the students and practitioners of Podiatry regardless of race, creed, color, or national origin.

However, as set down by most organizational constitutions, the purposes are basically idealistic in character. In effect, most have created a gap between the ideal and the real. We as Phi's through professional activities, have accomplished our constitutional ideals and have converted them to reality. Through extensive programs as Fairhill Psychiatric Hospital and a local church convent, fraternity members have the opportunity to supplement their didactic, pre-clinical, and clinical acumen in various phases of Podiatric Medicine which includes; podopediatrics, Podogeriatrics, dermatology, palliative podiatry, foot surgery, hospital protocol, and diagnostic acuity. Clinical and home demonstrations stress the supplementation of certain basic skills in instrumentation, injections, radiology, and strappings. We take pride in our Special Lecture Series which involves monthly presentations by many podiatry practitioners of national prominence.

As with any fraternity, Phi is not devoid of social activities. Realizing that the cement of any organization is unity, various social activities are sponsored through the Year so that members can meet on a more informal basis.

To conclude, Phi, together with KTE and AGK provide a vital force on the educational scene at the Ohio College of Podiatric Medicine.
