**Biographical Sketch:**

Sean Sabihi is a Kent State University undergraduate student who is majoring in Psychology (B.S.) and minoring in User Experience Design. He is a junior who is involved in many different areas on campus including the academic fraternity Psi Chi for psychology majors, a mentor in the Peer Mentor Program for incoming freshman to the department, a member of two other extracurricular student organizations, a user experience designer at a student based advertisement agency in downtown Kent, and an understudy for university faculty member Dr. Christopher Was’ cognitive psychology lab. The main research interest being focused on this semester regarded studies focusing on relationships between working memory, strategy, and categorization, which is the focal point of his presentation today.
